Elevate your therapy practice!

Are you ready for an easy way to write goals and monitor progress? Whether you are creating goals individually or collaboratively, this workshop will help you set goals that are easy to monitor and design a

monitoring tool that can help you decide whether your client is on track, it's time to change the intervention, or it's time to work on more challenging goals.

Stress-free monitoring begins with a well-written goal. While making a goal SMART (Specific, Measurable, Attainable, Relevant, Time-Bound) is a great start, how many times have we written a SMART goal that contained too many conditions to be easy to measure?! So, in the morning, you will learn the 3 Common problems with SMART goals and the 4 Strategies to make your SMART goal easy to monitor. You will practice utilizing Apply EBP's simple worksheet for goal creation with the guidance of your instructor. You will then go through the 3 Steps for the creation of an accompanying data collection system. You will gain 4 Tips for making it user-friendly to different members of the team, and helpful in making informed decisions. You will learn and practice how to use this data collection system in making objective decisions about whether your client is on track, it's time to change the intervention, or it's time to work on more challenging goals.

Finally, Carlo will discuss the 5 Steps of the collaborative goal-writing process, and how you can utilize the lessons you learned earlier in the day to collaboratively-written student-centered goals.

Bring sample goals that you need to improve and case vignettes that you find challenging. There will be multiple opportunities to practice goal creation, monitoring, and decision-making, as well as interactive Q&A discussions with the instructors. Leave the day with concrete strategies and the confidence to create goals and monitor them meaningfully!

Audience: OTs, OTAs, PTs, PTAs, SLPs & Educators

Educational Level: Intermediate

Learning Objectives

At the completion of this course, attendees will be able to:

1. Create a participation-based/occupation-based goal that is easy to monitor, on a given case study
2. Determine two strategies for creating a simple data collection system for a goal
3. Use the analysis of client data for clinical decision-making, given graphed data of a case scenario
